Tackling the data quality problem in healthcare head on

# CareXML *Data Quality Assurance*
Tackling the data quality problem in healthcare head on

STALIS
Excellence in healthcare data

Overview

Reliable information, and the quality of the underlying data that supports it, is fundamental to any healthcare organisation's ability to deliver effective treatment of patients.

Furthermore, access to data that is accurate, valid, reliable, timely, relevant, complete, unambiguous and unique is crucial in supporting all levels of patient care, management processes, clinical governance, service agreements, remuneration, accountability and future healthcare planning.

CareXML Data Quality Assurance can help to ensure this at any given time.

CareXML Suite

Data Quality Manager

System Adapter

Electronic Patient Record (EPR)

Features

- Daily insight into the quality of data
- Ability to adjust and add/remove KPI's accordingly to actual needs
- Tried and tested methodology and tools
- Explicit areas for focus and improvement
- Highly automated to minimise user intervention
- Practical guidance provided on how to improve data
- Delivered by experienced consultants with many years of experience
- Vendor neutral tools and processes

Benefits

- Maintained level of data quality
- Increased confidence in your data
- Clinical decisions based on accurate, good quality data
- Improved patient safety and outcomes
- Minimise adverse impact to revenues
- Unlocks data for future migration and transformation
- Improvement to methods of data input within your organisation
- Minimise risks in EPR/PAS implementation
- Maximise efficiency of new EPR/PAS functionality
